css rules

DESCRIPTION

Create a dozen CSS rules* in an external CSS file (see page 235 of *HTML & CSS*) and link all of your previous homework assignments to this CSS file. Commit these changes to GitHub in your master branch. Then, create a new branch named “alternate.” Revise the rules you created in your CSS file to produce a radically different look. Commit these changes to GitHub in your “alternate” branch.

OBJECTIVE

Cascading Stylesheets (CSS) is a rule-based system that governs the appearance of webpages. This assignment is intended to familiarize students with the process of authoring CSS rules and demonstrate the power of global styles. The assignment will also deepen students’ understanding of GitHub and the experimentation it facilitates.

DEADLINE

This assignment is due at the beginning of the next class. Please commit and upload your files to your GitHub repository, as directed above, in a subfolder named “04 css rules.”

WEIGHT

This assignment carries a weight of 1.4.

**Please keep the CSS selectors simple and limit yourself only to HTML tags, no classes or IDs yet.*
